NOVAPOLIS

# Our story

KPY Cooperative from Kuopio purchased the entire share capital of Technopolis Kuopio Oy in autumn 2019. At the same time, the company's name changed to KPY Novapolis Oy and in 2023 to Novapolis. In January 2026, Keski-suomalainen became a minority owner of Novapolis with a 3,46 % ownership stake.

Novapolis is a pioneer in the modern working day experience. We can provide everything you need for your business and employees – adaptable premises, services and experts, and responsible purchases. With us, you become part of our vibrant community, actively building the competitiveness and vitality of our region.

We operate as a hub of expertise, development and internationalisation for the Kuopio region, where people and companies meet. We are located at three different campuses in Savilahti in Kuopio, and in Toivala in Siilinjärvi.

**You can focus on  
your core business,  
we will take care  
of the rest.**

# We provide all this:

## Active community

The diverse activities organised by our community guarantee that your employees will thrive and that they are kept informed of all the topical issues of the region.

## Services for a successful working day

Turnkey services to your exacting needs, all with just one contract, such as campus, cleaning, meeting and security services.

## A modern working day

Inspiring CoWork spaces at your disposal, as well as diverse meeting facilities for work and leisure.

## All in one place

Services that make every working day go smoothly: e.g. gym, hair salons, massage therapists, car wash, and restaurants.

## Experts around us

The colleges located at our campuses ensure that up-to-date expertise is always available.

## Employee benefit programme & purchasing community

Our Sisärinki service providing a range of different benefits, and the SisärinkiPro service offering business purchases, now free for one year.

## Security

Our data security service, property maintenance, access control and key management are part of our security services.

## Adaptability

Premises that adapt to your company's needs, from one person to the business premises for hundreds of employees.

## Healthy workspace

The healthy working environment and indoor air quality in our premises support the wellbeing of your employees.

## Responsibility

In our premises, we have paid particular attention, e.g. to energy efficiency, reducing water consumption, and giving preference to low-emission materials.

# Novapolis customer process from lead to deal and beyond

## Our process

- Novapolis manages its customer acquisition process solely by itself.
- Biggest player in town — **50%+ market share**.
- Sales process spans from awareness creation to deal and beyond.

## Our reality

1. We *think* we know the Kuopio office market.
  2. Many systems, lots of manual and duplicate work.
- **Challenges presented with brutal honesty.**

# Data & systems

Customer data lives across multiple systems — each owned by a different team and updated manually.

## HubSpot

### CRM

Customer Relationship Management

## Sokopro

### Documents

Construction & real estate document management, BIM and project files

## Fatman

### Real estate ops

Lease & asset management, maintenance, invoicing

## Zefort

### Contracts

Contract lifecycle management — create, sign, store, search

## Teams

### Collaboration

Team messaging & announcements

## Outlook

### Email

Email & calendar

## Excel

### Spreadsheets

Trackers, availability lists, ad-hoc data

## SharePoint

### File storage

Document libraries & file sharing

# Challenge 1: Warm lead generation

## Inbound

|                   |                     |
|-------------------|---------------------|
| Website & SEO     | Newsletters         |
| Content marketing | Paid advertising    |
| Own events        | Live chat / chatbot |
| Property portals  | Guides etc.         |

## Outbound

|                   |                      |
|-------------------|----------------------|
| Cold calling      | Direct mail          |
| Email prospecting | CRM — dormant leads  |
| LinkedIn outreach | Trade shows & events |
| Company registers | Website visitors     |

## Networks

|                    |                     |
|--------------------|---------------------|
| Customer referrals | Referral program    |
| Employee networks  | Brokers             |
| ELY centres & city | Incubators          |
| Universities & UAS | Chamber of Commerce |

## Signals

|                             |                     |
|-----------------------------|---------------------|
| Job postings                | Funding round news  |
| Company changes (PRH)       | Competitor tracking |
| Building permits & lot data | Press & releases    |

## Challenge 1: warm lead generation

- Yes, we have leads, some ice cold and some warm.
- Those come from many sources.
- For some we only know a name of the company, for some we know more.
- How to automatically generate a list of potential leads with background information?
- How to prioritize the leads? (year of foundation, new recruits, new management, bad air problem etc.)
- Who are the decision makers and what is their contact information?
- What would be the initial pitch from our side to them?

Main tool: Hubspot CRM and all possible data sources (news, linkedin, official registries etc.). Claude compiles?

# Challenge 2: Offer creation

When an offer is created:

- **Customer information and background**
  - By the sales team, ideally from Hubspot CRM
- **Price**
  - calculated by the sales team
  - exceptions approved by CEO
- **Blueprints**
  - In Sokopro or in Sharepoint (accessible through an excel file: availablespaces.xls)
  - Some are not necessarily up-to date
- **Renovation costs**
  - calculated by Novapolis Real estate team (no calculation model exist)
- **Pictures / visualizations**
  - do not exist or taken case-by-case

## The problem

Too many systems. Unreliable data.  
Every offer is hand-assembled  
from scattered, often outdated  
sources.

## The dream

All data lives in **HubSpot CRM**, always up-to-date — and offers are generated automatically.

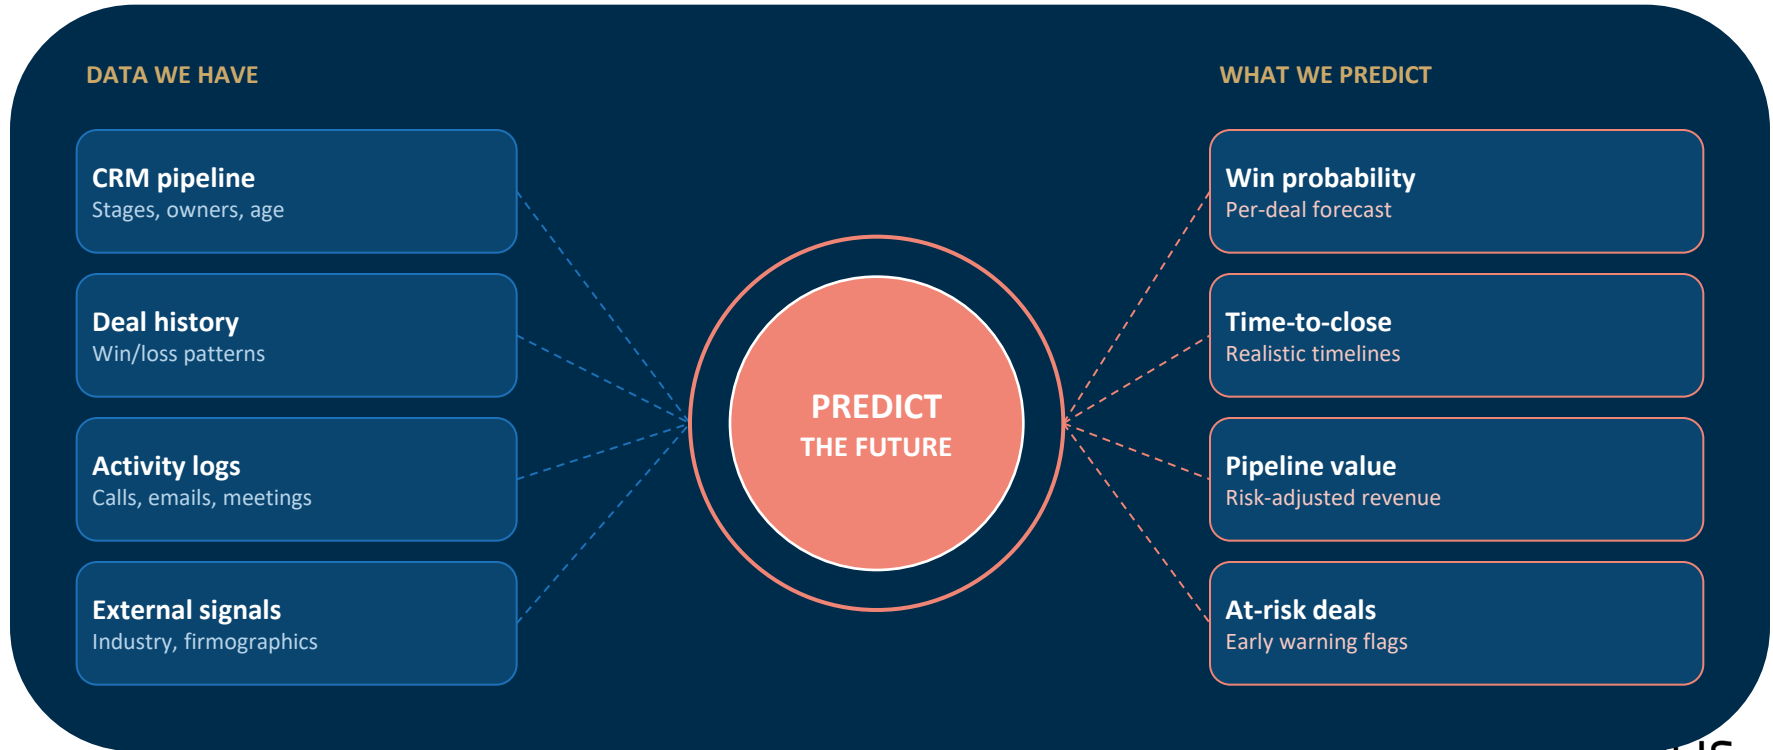

NOVAPOLIS

## Problem 3: When the customer says yes...

1. The customer is set up in **Fatman** by the Business Controller initiated by the sales team
2. A draft of contract is created in **Fatman** and sent to customer via email.
3. Details are agreed via **email**.
4. Once the customer approves it, the final contract is uploaded into **Zefort**.
5. Novapolis CEO signs it after which the customer. (**Zefort**)
6. After signing the contract, the status of contract is changed from draft to active lease in **Fatman** (note that if the move in is fast, the business controller needs to be notified to invoice the current month as well)
7. A contact details document is sent to the customer for filling via email as **Microsoft Word** document (typically, it takes a few reminders to get it done). Manually.
8. When the form arrives, the reception personnel copies the information to the **Hubspot CRM**.
9. Also updates **key management systems**, hands out keys, manages parking permits, signage updates etc.
10. Sales team updates the move-in tracker **excel** (koontimuutot.xls) with data (move details, space, company, date etc.)
11. Sales team updates the available spaces **excel** (vapaattilat.xls), removes the space for example.
12. Sales team creates a post in **Teams** with all the data above + cleaning scope to inform other teams about the new customers.
13. Move in request (Muuttopyyntö) is created and filled in by reception and services (checklist what needs to be done when move-in).
14. Sales team updates the **Hubspot CRM** (changes status to active customer, segment, deal details including size etc.)
15. A **welcome event** is organized to the customer by the services team.
16. Access information to **customer extranet** (Novanet) is sent out manually via email to the customer.

# Challenge 4: From pipeline data to predictions

NOVAPOLIS
